

MOHAMMED HABI BUR RAHMAN

WEB DEVELOPER | FULL-STACK DEVELOPER | MERN STACK (REACT 18 & NODE.JS) | REST APIs

Chennai, Tamil Nadu, India | +91 9841080909 | Ainz.Mhr@gmail.com | [linkedin.com/in/mhr-ainz](https://www.linkedin.com/in/mhr-ainz) | github.com/AinzAmour

Notice Period: Immediate Joiner | Open to Relocation & Remote / Hybrid Roles

PROFESSIONAL SUMMARY

Results-driven Full-Stack Web Developer with a strong Computer Applications (BCA) foundation and proven expertise building secure, scalable end-to-end web applications. Proficient in the modern MERN stack (React 18, Node.js, Express, MongoDB Atlas), frontend styling (Tailwind CSS, Vite), RESTful API design, and asynchronous Python microservices. Experienced in implementing multi-tenant Role-Based Access Control (RBAC), JWT authentication with bcrypt salting, and defensive web security (OWASP Top 10 mitigation). Demonstrated engineering caliber through shipping production-deployed systems, winning national Capture The Flag (CTF) competitions, and receiving responsible disclosure acknowledgment from Zerodha Broking Limited. Available immediately.

TECHNICAL SKILLS

Frontend Architecture: React 18, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Vite, Framer Motion, Context API & Hooks, React Router DOM, Responsive Design, Web Vitals, Axios

Backend & REST APIs: Node.js, Express.js, Python (FastAPI, Flask), RESTful API Design, JWT Authentication, bcrypt, WebSockets, CORS, Helmet.js, Rate Limiting, Middleware Architecture

Databases & Modeling: MongoDB Atlas, Mongoose ODM, PostgreSQL, MySQL, SQLite, Data Validation, Indexing, Schema Modeling, CRUD Operations, Query Optimization

DevOps, Cloud & Tooling: Git, GitHub, Docker, Docker Compose, Vercel Edge Deployment, Render, Linux (Ubuntu/Debian, Arch), Postman, Chrome DevTools, Nginx Reverse Proxy

Web Security & Hardening: OWASP Top 10 Mitigation (XSS, CSRF, SQLi, IDOR), Role-Based Access Control (RBAC), Session Security, Input Sanitization, Audit Logging, HTTP Security Headers

FEATURED WEB DEVELOPMENT & FULL-STACK PROJECTS

NEXUS-VMS: Enterprise Access & Workplace Management System | MERN Stack, React 18, Node.js, Cloud | 2025 - 2026 (Live App: nexus-vpms.vercel.app | [GitHub](#))

- Architected full-stack enterprise visitor management platform using React 18, Vite, Node.js, Express, and MongoDB Atlas, enforcing RBAC across Admin, Receptionist, and Host portals.
- Built responsive, accessible UI with Tailwind CSS featuring a keyboard-first Command Palette (Cmd+K), real-time visitor queues, and printable security pass badge slip generation.
- Engineered stateless JWT authentication with bcrypt salting, Helmet security headers, rate limiting, and automated visitor lifecycle state machines (PENDING -> APPROVED -> CHECKED_IN).
- Deployed live frontend to Vercel edge and API to Render; configured GitHub Actions CI/CD pipeline executing 12 automated unit and security tests on every commit.

Adaptive WAF & Security Automation Engine | Python, FastAPI, Docker, Asyncio | Final Year Capstone Project | 2025 - 2026

- Engineered an asynchronous HTTP/S reverse proxy and web security engine in Python/FastAPI inspecting web payloads in real time with sub-10ms packet processing latency.
- Implemented token-bucket rate limiting, regex-driven signature detection, and OWASP Top 10 threat mitigation (SQL injection, XSS, and automated brute-force attacks).
- Designed structured JSON logging pipelines and containerized with Docker/Docker Compose, streamlining zero-downtime deployment and automated load testing.

PROFESSIONAL EXPERIENCE & INTERNSHIPS

Software & Web Security Intern - Cyber Secured India | Apr 2025 - Jul 2025

- Authored JavaScript and Python automation scripts to perform regression testing, API endpoint validation, and payload integrity checks across web services.
- Audited web applications for OWASP Top 10 vulnerabilities (XSS, IDOR, broken auth), helping remediate client-side injection flaws and harden CORS configurations.

Freelance Web & Systems Developer - Self-Employed | Chennai, India | Jul 2023 - May 2025

- Built responsive client web interfaces and full-stack workflow automation tools, integrating relational/NoSQL backends and RESTful API workflows for local business clients.
- Diagnosed and resolved 150+ full-stack, networking, and system issues with a 95%+ first-contact resolution rate, optimizing Lighthouse performance scores.

HONORS, RECOGNITIONS & CTF ACHIEVEMENTS

- **Zerodha Responsible Disclosure:** Acknowledged by Zerodha Broking Limited for identifying and reporting web application security vulnerabilities.
- **1st Place (Winner):** ARCANE 2K25 National CTF, B.S. Abdur Rahman Crescent Institute | Oct 2025
- 2nd Place: TECHASTRA '25 National CTF | 2025
- **3rd Place:** ZERODAY CTF 2025 Global CTF, Z3R0_LOG0N | Oct 2025
- **3rd Place:** Hackers Asylum CTF, SSN College of Engineering
- **Top 25 Finalist:** H7CTF, SRM University | Oct 2025

EDUCATION & CERTIFICATIONS

Bachelor of Computer Applications (BCA) - Dr. M.G.R. Educational and Research Institute, Chennai | 2023 - 2026 | CGPA: 7.97/10 (Immediate Joiner)

Certifications: Google Cybersecurity Professional | Jr. Penetration Tester (TryHackMe) | Cyber Security & Digital Forensics (CSI) | Zerodha Recognition | Web & Full-Stack Development (Target 2026)
